

# UV Protective Eyewear

The UV-absorbing material in the UVF-80 face shield meets ANSI specification Z87.1 for safety eyewear and OSHA standard 1910.133 for eye and face protection. While face shields offer a good deal of protection for exposed skin, they are considered to be secondary eye protection, especially when working for extended periods with short or medium wave UV or when “stray” UV exposure is possible. Therefore, it is recommended that all face shields be used in conjunction with a primary eye protector. Spectro-UV offers a complete line of primary UV protective and fluorescence-enhancing eyewear.

UVS-30 UV-absorbing spectacles, clear

UVS-40 UV-absorbing, fluorescence-enhancing spectacles, yellow

UVG-50 UV-absorbing goggles

10/20 AM04057-4  
PRINTED IN U.S.A.
