

NEW FLIR ETS320™

Thermal Imaging Solution for Electronics Testing

Take the Guesswork out of Thermal Testing

Measure small components down to 170 μm per pixel spot size

Determine where to add or remove thermal management devices

Connect over USB a computer to analyze data in FLIR Tools+

Reduce Test Times

The FLIR ETS320 takes the guesswork out of thermal testing, for fast discovery of hot spots and potential points of failure.

Improve Product Design

The FLIR ETS320 promotes design improvements and shortens product development time by detecting design flaws that materialize as heat.

Designed for Laboratory Work

The ETS320 is designed for hands-free laboratory testing, with simplified features that allow users to focus on their work instead of on the camera controls.

Save Money

Improve rapid prototyping and reduce product development cycles.
